WHAT'S NEW IN THE HUNTING INDUSTRY

Keep up-to-date with the newest products from leading companies in the hunting industry. Products featured here will help ensure you are at the top of your game for your next hunt. Check out the What's New section each month for information about the latest hunting gear.

ALLTERRA ARMS MOUNTAIN SHADOW STEEL RIFLE

AllTerra Arms, manufacturer of precision bolt-action rifles with exclusive patented technology, recently announced a new rifle model – the nimble Mountain Shadow Steel. This match-grade rifle achieves benchrest accuracy with patented Bolt-to-Bore Alignment™ and a distinct, spiral-fluted barrel design. The Mountain Shadow Steel is so accurate that it's backed by AllTerra Arms' guarantee that promises sub-1/2" 3-shot groups with premium factory ammo; sub-1/4" 3-shot groups with custom AllTerra Arms ammunition; and no significant change in accuracy when shooting different bullet weights.

Like all AllTerra Arms rifles, the Mountain Shadow Steel features a patented Dual-Lock Barrel Seat™ and .0005" machining tolerances to achieve exact Bolt-to-Bore Alignment™. The patented receiver design also delivers No-Fail Cycling™ when working the action. The rifle will never jam or fail, guaranteed.

AllTerra Arms developed custom loads specifically for the Mountain Shadow Steel that produce velocities from a 22" barrel which exceed the performance of popular loads from 26" barrels. All barrels are 5/8"-24 threaded for suppressors and include a stainless-steel directional muzzle brake.

The base weight of the Mountain Shadow Steel is impressive at as little as 6.5 pounds. It is available in 6mm Creedmoor, 6.5 Creedmoor and 6.5 PRC, 6.5 SS, 6.5 SST, 28 Nosler, 7 Rem Mag, 7MM SAUM, 7 SS, 300 SS, 300 PRC, and 338 SS. Each rifle is built-to-order on AllTerra Arms' innovative Carbon Hunter stock in a wide variety of finish options. The stock design promotes excellent shooting form while dramatically managing recoil.

MSRP: \$5,495

EBERLESTOCK BANDIT PACK

The Bandit is the ultimate go-anywhere, do-anything hunting day pack. Whether used as a pre-season scouting pack where load-carriage isn't a priority, a run-and-gun ultralight pack, or an essentials-only go bag that lives in the pickup, the Bandit is ready for any adventure. The exterior utility panel features laser cut MOLLE webbing to allow the attachment of MOLLE compatible accessories and pouches or to carry a jacket and other gear for immediate access. The water bottle side pockets can hold a tripod and/or spotting scope as the utility panel straps will secure them tight against the side. Inside the top lid, you'll find small item organizers like a zippered mesh pocket and a pistol magazine pouch. With about 1300 c.i. of internal volume, the Bandit is spacious enough to carry a day's worth of gear without slowing you down.

MSRP: \$129

PRODUCT REVIEW

ALLTERRA ARMS MOUNTAIN SHADOW CARBON RIFLE

The Mountain Shadow Carbon, weighing in at just 5 3/4 pounds, is a compact, lightweight rifle that packs a heavyweight punch. It features patented Bolt-to-Bore Alignment™ for exact concentricity and patented No-Fail Cycling™ for guaranteed operation. With its match-grade, hand-lapped, carbon-wrapped barrel and innovative stock design, you'll enjoy guaranteed sub 0.25" three-shot groups with AllTerra's custom ammunition and sub 0.5" three-shot groups with premium factory ammo.

Design, research, and testing of the Mountain Shadow spanned nearly five years with valuable input from more than 50 hard-core sheep hunters and guides who know what they need from a lightweight, long-range rifle. During that time, we developed custom loads specifically for this rifle that produce velocities from a 20-22" barrel that exceed the performance of popular loads in a 26" barrel.

"In today's long-range rifle market, standing out in the crowd can be very difficult. When I came across a relatively newcomer to the long-range rifle industry claiming sub 0.25" groups, I had to dig in and find out what AllTerra Arms was all about. The Mountain Shadow Carbon nailed all the specs for weight and quality components that I look for in high-quality custom hunting rifle. I went with a 6.5 Creedmoor in the Mountain Shadow Carbon with AllTerra custom ammo to test out the sub 0.25" grouping for myself. To say I was impressed would be an understatement! Within a couple zeroing shots and 10 verifying shots for velocity from 100 to 600 yards, I was ranging and dialing for targets out to 800+ yards and drilling them. The long-range rifle industry is one of the hardest industries right now to stand out in, and after handling the Mountain Shadow Carbon, I can honestly say that AllTerra Arms is casting a shadow on most of the competition."

– Garth Jenson, Hunt Advisor

MSRP: \$5,995 (starting base model)
